

Mirage Heights Roof Project Update...

At this time, all of the roofs have been repaired and reinforced where needed. The full application of the elastomeric bonder/primer coat (light blue) has been applied to all of the roofs in the community.

The roofers are now moving into the final stage of the process, which is applying the final top coat of the elastomeric coating to all of the roofs (white). This will take a couple more days.

Completion is expected to be Thursday afternoon.

Everything has gone perfectly and according to plan and to schedule thus far.

Thank you for your patience and assistance while this project is completed.
